Subject: REMINDER – Action Required by March 31st - Blood Lead Survey

Lead poisoning is one of the most common and preventable environmental illness in California. There are often no apparent symptoms when a child is exposed to lead, which is why a blood lead test is the best way to find out if a child has lead poisoning.

Federal and state laws require children enrolled in Medi-Cal to have blood lead tests at 1 and 2 years of age. Inland Empire Health Plan (IEHP) would like to support you in your efforts to increase blood lead tests in our communities, but **we need your help in identifying where the gaps exist.**

Please take a few moments to complete the Blood Lead Survey below to assist us in developing a strategy to increase blood lead test rates in the Inland Empire.

Deadline to submit a response is Friday, March 31, 2023.

You can complete the survey by scanning the QR code with a mobile device or by clicking on the link.
